

AUTOMATED PROCUREMENT DATA

J.A. White's integrated procurement automation platforms transform complex data into actionable intelligence across the procurement lifecycle. By automating workflows, centralizing critical information, monitoring compliance, and identifying risks earlier, organizations can reduce manual effort, improve accuracy, accelerate decision-making and maintain greater visibility and control over procurement operations.

For government contractors, procurement automation provides an additional advantage by helping maintain continuous CPSR readiness. Automated workflows, make it easier to demonstrate fair and reasonable pricing, proper competition, required FAR and DFARS flowdowns, and compliance with purchasing system requirements during DCMA reviews.

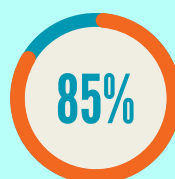

Faster procurement cycle times.

Fewer manual data entry errors.

Reduction in manual processing effort.

Faster preparation of procurement documentation.

Faster document review and retrieval.

Reduced CPSR Findings.
